

COVID-19 Vaccination Pace in Brazil (2021–2022)

Monthly Average Daily Vaccination Rate and Peak Vaccination Days

Compiled from official Brazilian Ministry of Health data

September 30, 2026

Abstract

This report summarizes the pace of COVID-19 vaccination in Brazil from the start of the national campaign (17 January 2021) through December 2022. It presents (1) the month-by-month average number of doses administered per day, with an accompanying chart, and (2) the specific calendar day on which the highest number of doses was administered in each month. Brazil had no COVID-19 vaccine in use during 2020; the earliest data available is 17 January 2021, which is why the analysis begins there rather than in 2020.

1 Data Source and Methodology

The Brazilian Ministry of Health (*Ministério da Saúde*) publishes its official COVID-19 vaccination panel (“Vacinação - COVID-19”) as an interactive Power BI-style dashboard hosted at <https://infoms.saude.gov.br>, linked from the department landing page at <https://www.gov.br/saude/pt-br/composicao/seidigi/demas/covid19>. That dashboard is a JavaScript application with no downloadable data table and is protected against automated access, so the day-by-day figures behind it cannot be scraped directly.

Instead, this report uses the same underlying official series as compiled, cleaned, and continuously updated by **Our World in Data (OWID)**, whose Brazil vaccination time series is sourced directly from the Brazilian Ministry of Health / OpenDataSUS reporting. This is the standard secondary source used by researchers and journalists precisely because the primary dashboard is not machine-readable. Full source details are given in Section 4.

Two figures are used from the source data:

- **daily_vaccinations** – OWID’s smoothed estimate of doses administered per day (a 7-day rolling figure, interpolated on days when the government did not publish a daily breakdown). This column is used for the **monthly averages** in Section 2, since it is essentially complete across the whole period (only the first day of the campaign is undefined).
- **daily_vaccinations_raw** – the actual reported day-to-day new-dose count, used to identify the **single calendar day of peak vaccination** in each month (Section 3).

Data-quality caveat: the raw daily breakdown is complete for essentially all of 2021, but official day-by-day reporting became patchier during 2022 as the campaign wound down – on some days only a cumulative running total was published, without a same-day new-dose figure. Coverage (the share of days in a month with a usable raw value) ranged from 100% in most of 2021 down to as low as 29% in some months of 2022. Where coverage is low, the reported “peak day” should be read as the highest *reported* day, not necessarily the true single highest day of the entire month; this is flagged explicitly in Table 3.

2 Monthly Average Vaccination Rate per Day

Table 1 and Figure 1 show the average number of doses administered per day, averaged over each calendar month, from January 2021 (start of the campaign) through December 2022.

Table 1: Average doses administered per day, by month (2021–2022)

Month	Avg. doses/day	Month	Avg. doses/day
Jan/21 ^a	116,305	Jan/22	957,290
Feb/21	230,500	Feb/22	1,100,371
Mar/21	407,336	Mar/22	719,655
Apr/21	785,900	Apr/22	510,743
May/21	733,689	May/22	388,218
Jun/21	1,017,785	Jun/22	427,119
Jul/21	1,302,031	Jul/22	402,683
Aug/21	1,654,413	Aug/22	128,636
Sep/21	1,511,318	Sep/22	112,450
Oct/21	1,356,783	Oct/22	11,040
Nov/21	1,015,730	Nov/22	33,571
Dec/21	740,331	Dec/22	200,192
2021 average	948,380	2022 average	411,962

^aJanuary 2021 covers only 15 days (17th–31st), since the campaign started on 17 January 2021.

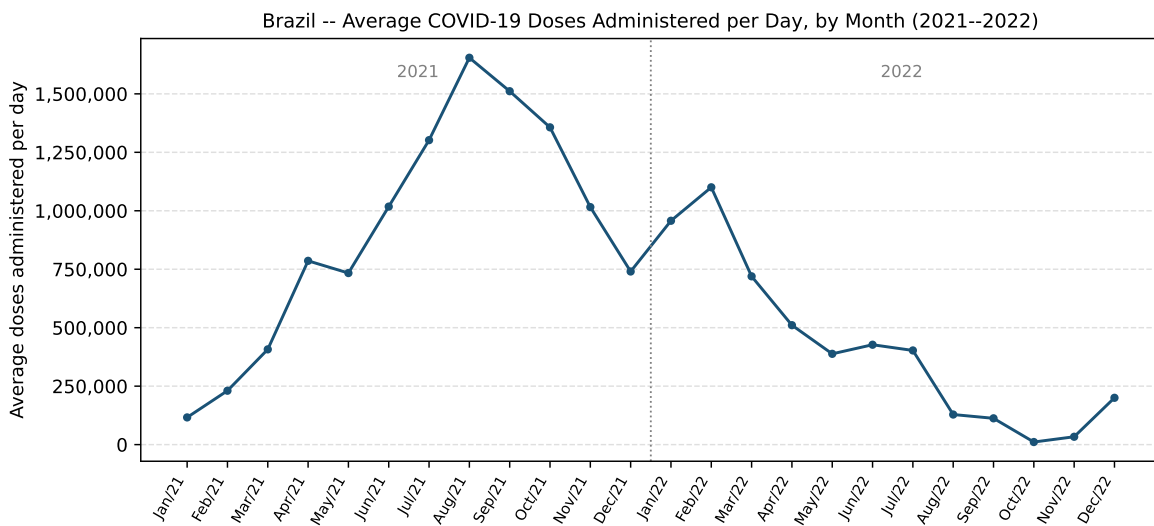

Figure 1: Average COVID-19 doses administered per day in Brazil, by month (Jan 2021–Dec 2022). Source: Brazilian Ministry of Health data, as compiled by Our World in Data.

By the end of 2021, approximately 331 million cumulative doses had been administered nationwide, at an average pace of about 948,000 doses per day; by the end of 2022 the cumulative total had reached approximately 480 million doses, but the 2022 daily average pace had fallen to about 412,000 doses per day. The clear peak period of the campaign was August–October 2021, driven by the

mass first- and second-dose rollout; the pace declines steadily through 2022 as most of the eligible population was already vaccinated and booster uptake slowed.

3 Day of Peak Vaccination, Month by Month

Tables 2 and 3 list, for every month from January 2021 to December 2022, the single calendar day on which the highest number of doses was recorded, together with that day’s dose count and the raw-data coverage for the month (see the caveat in Section 1).

Table 2: Day of peak vaccination per month – 2021

Month	Peak date	Doses that day	Data coverage
Jan/21	29 Jan 2021	360,715	93.3%
Feb/21	12 Feb 2021	429,070	100.0%
Mar/21	29 Mar 2021	943,825	100.0%
Apr/21	23 Apr 2021	1,782,040	100.0%
May/21	06 May 2021	1,048,363	100.0%
Jun/21	17 Jun 2021	2,259,621	100.0%
Jul/21	22 Jul 2021	1,932,002	100.0%
Aug/21	17 Aug 2021	3,002,675	100.0%
Sep/21	10 Sep 2021	2,407,953	100.0%
Oct/21	25 Oct 2021	2,419,442	100.0%
Nov/21	05 Nov 2021	2,022,153	100.0%
Dec/21	03 Dec 2021	1,714,641	87.1%

Table 3: Day of peak vaccination per month – 2022

Month	Peak date	Doses that day	Data coverage
Jan/22	17 Jan 2022	3,976,605	87.1%
Feb/22	18 Feb 2022	1,915,875	100.0%
Mar/22	10 Mar 2022	2,086,954	93.5%
Apr/22	05 Apr 2022	930,909	70.0%
May/22	27 May 2022	1,390,356	74.2%
Jun/22	09 Jun 2022	1,648,192	80.0%
Jul/22	11 Jul 2022	1,125,054	29.0%
Aug/22	29 Aug 2022	1,224,322	58.1%
Sep/22	26 Sep 2022	455,415	86.7%
Oct/22	18 Oct 2022	18,134	61.3%
Nov/22	30 Nov 2022	1,645,274	40.0%
Dec/22	18 Dec 2022	2,024,465	54.8%

Coverage below 90% (orange) means the government did not publish a same-day dose count for at least 1 in 10 days of that month; below 65% (red) means it is missing for more than a third of the days. In those months the listed peak is the highest *reported* day, and the true monthly peak may be underestimated.

Two days stand out over the whole period. **17 August 2021** (about 3.0 million doses) is the best-

supported record of the entire campaign, recorded during a month with complete daily reporting, and coincides with the height of the nationwide second-dose push. **17 January 2022** shows an even higher figure (about 4.0 million doses), but this falls in a month with only 87% coverage and may partly reflect a backlog of doses reported together after a reporting gap, so it should be treated with more caution than the August 2021 figure.
